

Window Shutters

- ✓ Three types of shutters are available: side-hung, tilt & fold, and sliding.

- ✓ In addition, each shutter is offered with slats: movable with the possibility of regulating the flow of light and air, fixed and arranged down at a constant angle.

A solution which is a combination of the durability of aluminum and the traditional design of shutters. Adding them to windows and doors will ensure a unique look, guarantee effective protection, and give a unique style to the whole house. Each shutter is made of the highest quality aluminum, which guarantees the best protection against external conditions and durability for years. It consists of a thick, extruded frame filled with aluminum lamellas. For the production of shutters, parts of a reputable supplier are used - the Spanish company Cortizo. These components are characterized by adequate stiffness with a light and slim structure.
